gyushi320@gmail.com | San Jose, CA | linkedin.com/in/gaoyuan-shi-a150bb405 | github.com/Ujang-shi

Education

Northeastern University - Master of Science in Computer Science (Align)

San Jose, CA | Expected May 2027

University of California, Davis - B.S. Economics; B.S. Mathematical Analytics and Operations

Davis, CA | June 2022

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: React, Node.js, Express, FastAPI, LangGraph, Vue

Databases: SQLite, PostgreSQL, MySQL, MongoDB, Redis, Milvus

Tools & Platforms: Git, Docker, REST APIs, Linux, AWS basics

Experience

Co-Founder & Software Developer, Ningjing Group LLC

Davis, CA | Jun 2022 - Dec 2024

- Built a full-stack international student service marketplace using React and Node.js/Express, supporting JWT authentication, service listings, and booking management.
- Designed RESTful APIs with SQLite-backed booking workflows for session scheduling, advisor availability, and real-time appointment status tracking.
- Developed a service-advisor matching module with SQL-layer category filtering, application-layer preference filtering, and availability ranking, reducing average assignment time by 40%.
- Integrated an AI-powered bilingual FAQ assistant using Anthropic Claude API with prompt caching on the platform knowledge base to reduce repeated query cost.
- Grew the platform from 0 to 500+ users by collaborating on go-to-market strategy and iterating product features from direct student feedback.

Back-End Developer Intern, Ningbo Industrial Chain Digital Technology Co., Ltd

Ningbo, China | Aug 2021 - Mar 2022

- Developed the Yongxinpei online platform using Java, enabling off-campus training institutions to manage transactions, operational data, and financial records for 50+ partner organizations.
- Implemented blockchain-based data recording to support tamper-resistant audit trails.

Projects

Deep Research Agent

Python, FastAPI, LangGraph, Vue,
OpenAI API, Tavily | 2026

- Led and implemented a full-stack multi-agent research assistant over 4 weeks, building intent routing between quick-answer and full research workflows.
- Designed an agentic pipeline covering planning, Tavily web search, local retrieval, evidence review, analysis, and report generation with a FastAPI streaming backend.
- Integrated long-term memory using PostgreSQL, Redis caching, and Milvus vector store for semantic retrieval and persistent personalized context.
- Supported OpenAI-compatible model configuration and custom OPENAI_BASE_URL for flexible model provider swapping without code changes.

Game Stats Tracker

React, Vite, Node.js, Express,
MongoDB, Passport.js | 2026

- Built a full-stack game record and statistics platform with a 2-person team, supporting authentication, game library management, and session logging for 1000+ seeded records.
- Developed a paginated player statistics dashboard with win rates, streaks, and head-to-head insights; achieved a 100/100 Lighthouse accessibility score and deployed to production.
